

IMPORTANT SAFETY INFORMATION

What is the most important safety information about VOXZOGO?

 VOXZOGO may cause serious side effects including a temporary decrease in blood pressure in some patients. To reduce the risk of a decrease in blood pressure and associated symptoms (dizziness, feeling tired, or nausea), patients should eat a meal and drink 8 to 10 ounces of fluid within 1 hour before receiving VOXZOGO.

With VOXZOGO® (vosoritide), you're part of a community

Over 2,600 children with achondroplasia around the world are being prescribed VOXZOGO*

*Data on file. BioMarin Pharmaceutical Inc.; 2024.

97% of insured patients[†] have secured coverage for VOXZOGO

BioMarin RareConnections™ can help you navigate the insurance process and identify assistance options you may be eligible for to start and continue on treatment.

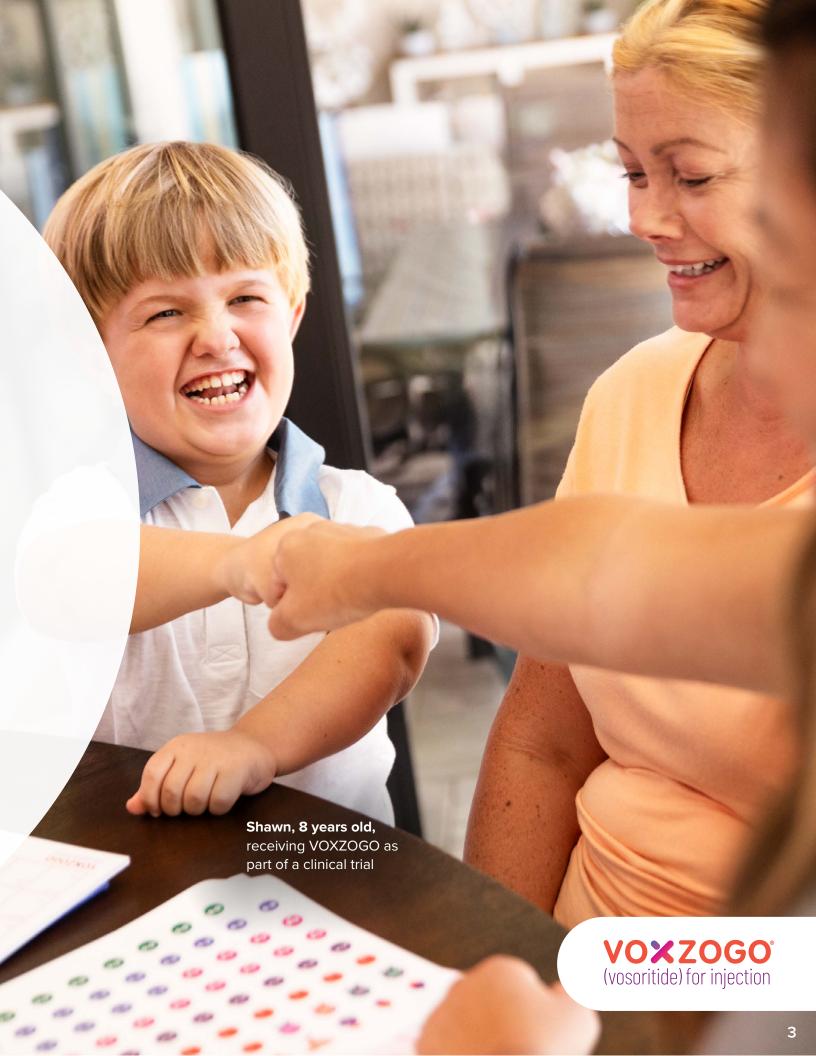

[†]BioMarin RareConnections Data on File. VOXZOGO patients included are eligible VOXZOGO patients who have enrolled in BioMarin RareConnections and are on commercial therapy. BioMarin RareConnections data from April through December 2023.

One-to-one product education and injection training tailored to your family's needs during your child's entire duration of treatment from a trained BioMarin Clinical Coordinator

What is VOXZOGO used for?

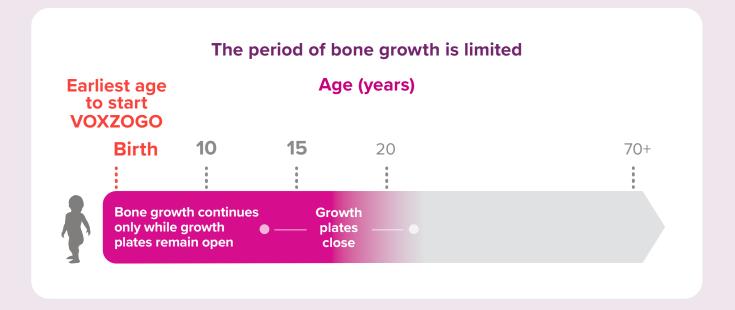

- VOXZOGO is a prescription medicine used to increase linear growth in children with achondroplasia and open growth plates (epiphyses).
- VOXZOGO is approved under accelerated approval based on an improvement in annualized growth velocity. Continued approval may be contingent upon verification and description of clinical benefit in confirmatory trials.

It's time to talk about VOXZOGO while your child is still growing

VOXZOGO® (vosoritide) is approved by the FDA to increase linear growth for children of all ages with achondroplasia and open growth plates.

VOXZOGO can help increase linear growth only while your child's growth plates remain open. Talk to your doctor about starting VOXZOGO early and staying on as long as possible.

What are the most common side effects of VOXZOGO?

• The most common side effects of VOXZOGO include injection site reactions (including redness, itching, swelling, bruising, rash, hives, and injection site pain), high levels of blood alkaline phosphatase shown in blood tests, vomiting, joint pain, decreased blood pressure, and stomach ache. These are not all the possible side effects of VOXZOGO. Ask your healthcare provider for medical advice about side effects, and about any side effects that bother the patient or that do not go away.

Children with achondroplasia can grow faster with VOXZOGO than without treatment

J year

Annualized growth velocity (AGV) in children taking VOXZOGO (n=60) increased from 1.68 inches/year to 2.23 inches/year, while AGV in children taking placebo (n=61) decreased from 1.60 inches/year to 1.53 inches/year

- ► In a clinical study of 121 children aged 5 to 15 years, linear growth was measured using AGV over 1 year
- AGV is linear growth over a 1-year period, and is a measurable way to study the impact of VOXZOGO

97%

of children (58/60) continued to take VOXZOGO after 1 year*

*One child discontinued due to injection pain, and one child discontinued due to fear of needles.

3 years Improvement in linear growth over baseline (from when treatment was started) was maintained over 3 years in an ongoing study[†]

At year 3, AGV was 2.02 inches/year

[†]These results are from an open-label extension study. This study did not have a placebo group, and caregivers, patients, and physicians were aware that all children were given VOXZOGO.

The safety of VOXZOGO was established in 2 robust clinical studies

For patients aged 5 to 15 years, the most common side effects seen in over 10% of VOXZOGO patients over 1 year in a clinical trial were: injection site reddening, injection site swelling, vomiting, injection site hives, joint pain, decreased blood pressure, and stomach ache.

The most common adverse reactions seen in over 10% of VOXZOGO patients under 5 years of age were injection site reactions and rash.

It's important to know:

- VOXZOGO may cause serious side effects, including a temporary decrease in blood pressure in some patients
- You can reduce the risk of decreased blood pressure and associated symptoms (dizziness, feeling tired, or nausea) by following these steps in the hour prior to receiving VOXZOGO:
 - Be well fed
- Be well hydrated

The overall safety profile of VOXZOGO in children under the age of 5 was similar to that seen in children aged 5 and up.

VOXZOGO is a daily injection that's given just under your child's skin

- VOXZOGO uses a short, thin needle—smaller than the one used for most vaccinations
- Your child's doctor will train you on how to give VOXZOGO
- ▶ BioMarin Clinical Coordinators can reinforce injection training provided by your child's doctor whenever you need it, throughout your child's time on treatment

Simple growth and weight checkups are important for children taking VOXZOGO. Work with your child's doctor to:

Get regular measurements taken

every 3 to 6 months

Get regular growth-specific monitoring from a specialist, like a pediatric endocrinologist

It's important to remember that every child is unique. Even with VOXZOGO, each child will grow at different times and at different speeds.

IMPORTANT SAFETY INFORMATION

What is VOXZOGO® (vosoritide) used for?

- VOXZOGO is a prescription medicine used to increase linear growth in children with achondroplasia and open growth plates (epiphyses).
- VOXZOGO is approved under accelerated approval based on an improvement in annualized growth velocity.
 Continued approval may be contingent upon verification and description of clinical benefit in confirmatory trials.

What is the most important safety information about VOXZOGO?

• VOXZOGO may cause serious side effects including a temporary decrease in blood pressure in some patients. To reduce the risk of a decrease in blood pressure and associated symptoms (dizziness, feeling tired, or nausea), patients should eat a meal and drink 8 to 10 ounces of fluid within 1 hour before receiving VOXZOGO.

What are the most common side effects of VOXZOGO?

The most common side effects of VOXZOGO include injection site reactions (including redness, itching, swelling, bruising, rash, hives, and injection site pain), high levels of blood alkaline phosphatase shown in blood tests, vomiting, joint pain, decreased blood pressure, and stomach ache. These are not all the possible side effects of VOXZOGO. Ask your healthcare provider for medical advice about side effects, and about any side effects that bother the patient or that do not go away.

How is VOXZOGO taken?

- VOXZOGO is taken daily as an injection given under the skin, administered by a caregiver after a healthcare
 provider determines the caregiver is able to administer VOXZOGO. Do not try to inject VOXZOGO until you
 have been shown the right way by your healthcare provider. VOXZOGO is supplied with Instructions for Use
 that describe the steps for preparing, injecting, and disposing VOXZOGO. Caregivers should review the
 Instructions for Use for guidance and any time they receive a refill of VOXZOGO in case any changes have
 been made.
- Inject VOXZOGO 1 time every day, at about the same time each day. If a dose of VOXZOGO is missed, it can be
 given within 12 hours from the missed dose. After 12 hours, skip the missed dose and administer the next daily
 dose as usual.
- The dose of VOXZOGO is based on body weight. Your healthcare provider will adjust the dose based on changes in weight following regular check-ups.
- Your healthcare provider will monitor the patient's growth and tell you when to stop taking VOXZOGO if they determine the patient is no longer able to grow. Stop administering VOXZOGO if instructed by your healthcare provider.

What should you tell the doctor before or during taking VOXZOGO?

- Tell your doctor about all of the patient's medical conditions including
 - If the patient has heart disease (cardiac or vascular disease), or if the patient is on blood pressure medicine (anti-hypertensive medicine).
 - If the patient has kidney problems or renal impairment.
 - If the patient is pregnant or plans to become pregnant. It is not known if VOXZOGO will harm the unborn baby.
 - If the patient is breastfeeding or plans to breastfeed. It is not known if VOXZOGO passes into breast milk.
- Tell your doctor about all of the medicines the patient takes, including prescription and over-the-counter medicines, vitamins, and herbal supplements.
